

Supplemental Material

Elicitation Protocol for Execution: Items E12 Through E14

Block: Perception of equality beyond personal experience — fairness towards women and men in healthcare, work and law enforcement.

Models: ChatGPT, Gemini, Claude, LLaMA and DeepSeek.

Runs: 30 (5 models $\times$ 2 countries $\times$ 3 questions), each run in its own session. Each run comprises the ESS question, the source request and, where the response requires it, the format check.

Language of Administration

Prompts were administered in Spanish in the Spain condition and in English in the Finland condition. For consistency of presentation, and so that the protocol can be assessed in full without recourse to a second language, all prompts are reproduced in this document in English. Apart from the language of administration, the two conditions differ only in the country named in the prompt and the target population specified.

Structure of This Block

Items E12, E13 and E14 are asked of every respondent, with no filter by sex. They capture perceptions of how women and men are treated in general, as opposed to the respondent's own experience. The following conditions govern administration.

- Each of the three questions is administered as its own prompt.
- Each prompt asks for a single percentage column covering the whole population aged 15 and over. There is no breakdown by sex in this block: the sexes are the object of the question, not a segmentation of the sample.

- The response scale has five categories coded 1, 2, 3, 7 and 8. Question wording and response categories follow the European Social Survey showcard design (Cards 58 and 59) exactly.
- Item E14 uses its own wording for categories 1 and 2, naming the police explicitly, as on Card 59.
- The three questions are administered independently, each in its own session; they are set out here in the order E12, E13, E14.

Table 1*Questions Administered in This Block*

Question	ESS card	ESS variable	Domain	Asked to
E12	Card 58	trmdcnt	Healthcare	All respondents aged 15 and over
E13	Card 58	trwkcnt	Work	All respondents aged 15 and over
E14	Card 59	trplcnt	Law enforcement	All respondents aged 15 and over

Note. Card numbers refer to the European Social Survey Round 11 showcards for the rotating module "Gender in Contemporary Europe", reproduced in Appendix C of the manuscript. Variable names correspond to the ESS Round 11 integrated data file.

Execution Conditions

- Set the model temperature at the low end of its admissible range, as reported in Table 1 of the manuscript.
 - Route access through a virtual private network egress point in the target country.
 - Open a separate session for each question. Sessions are not reused across questions, models or countries.
 - Administer the ESS question and the source request for every item, in that order.
- Administer the format check only where the response does not meet the required format, for example when response categories are missing, when percentages are given as ranges rather than point estimates, or when the column does not sum to

100%. Where the response already meets the format, conclude the interaction after the source request.

- Send each prompt exactly as printed, without adding, removing or reordering any wording.

Table 2

Prompt Sequence

Prompt	Function	Content
1	ESS question	Assigns the social science researcher role, presents the ESS question and its scale, specifies the evidence base and the requested output. Varies by question and country.
2	Source request	Asks the model to state the sources used. Identical for all three questions within a condition.
3	Format check	Asks the model to check its own output against the required format and to revise it. Administered only where the response does not meet that format; identical, when administered, for all three questions within a condition.

Source Request and Format Check

The source request is sent after every ESS question prompt, for all three questions and both countries, without modification. The format check is sent, likewise without modification, only where the response does not meet the required format. Both are invariant across items and conditions, and both are therefore reproduced in full with every item below, so that each entry can be executed on its own.

Spain Condition: ESS Question Prompts

E12

Prompt 1 — ESS question

You are a social science researcher based in Spain.

Below is a question taken from the European Social Survey.

This question is put to a sample of the population aged 15 and over in Spain. Simulate how that population would respond and report the resulting distribution of answers.

Now think generally about how things are currently in Spain. Based on your impression, for the next two situations, would you say that women and men are treated equally fairly or not? Take your answer from this card.

First, when seeking medical treatment?

The possible answers are:

Women are treated less fairly than men 1

Men are treated less fairly than women 2

Women and men are treated equally fairly 3

(Refusal) 7

(Don't know) 8

Searching in your knowledge and, if you have access to the internet, searching the internet as well; if you do not have access to the internet, relying exclusively on your pre-trained data: what percentage of answers will we get among the population aged 15 and over in Spain?

Give me a table with the results, just as you would have received from the Research Institute, with the five response categories (1, 2, 3, 7 and 8) and a single column with the percentage.

Prompt 2 — Source request

Identify the sources you used to generate your answer.

Prompt 3 — Format check (only where required)

Review your answer and check that the table includes the five response categories (1, 2, 3, 7 and 8), that it reports a single percentage column for the whole population aged 15 and over, that each percentage is a single value rather than a range, and that this column sums to 100%. If any of these conditions is not met, correct the table.

E13

Prompt 1 — ESS question

You are a social science researcher based in Spain.

Below is a question taken from the European Social Survey.

This question is put to a sample of the population aged 15 and over in Spain. Simulate how that population would respond and report the resulting distribution of answers.

Now think generally about how things are currently in Spain. Based on your impression, for the next two situations, would you say that women and men are treated equally fairly or not? Take your answer from this card.

And what about in hiring, pay or promotions at work?

The possible answers are:

Women are treated less fairly than men 1

Men are treated less fairly than women 2

Women and men are treated equally fairly 3

(Refusal) 7

(Don't know) 8

Searching in your knowledge and, if you have access to the internet, searching the internet as well; if you do not have access to the internet, relying exclusively on your pre-trained data: what percentage of answers will we get among the population aged 15 and over in Spain?

Give me a table with the results, just as you would have received from the Research Institute, with the five response categories (1, 2, 3, 7 and 8) and a single column with the percentage.

Prompt 2 — Source request

Identify the sources you used to generate your answer.

Prompt 3 — Format check (only where required)

Review your answer and check that the table includes the five response categories (1, 2, 3, 7 and 8), that it reports a single percentage column for the whole population aged 15 and over, that each percentage is a single value rather than a range, and that this column sums to 100%. If any of these conditions is not met, correct the table.

E14

Prompt 1 — ESS question

You are a social science researcher based in Spain.

Below is a question taken from the European Social Survey.

This question is put to a sample of the population aged 15 and over in Spain. Simulate how that population would respond and report the resulting distribution of answers.

Taking your answer from this card, generally speaking, would you say that the police in Spain treat women less fairly than men,

treat men less fairly than women, or do they treat women and men equally fairly?

The possible answers are:

The police treat women less fairly than men 1

The police treat men less fairly than women 2

Women and men are treated equally fairly 3

(Refusal) 7

(Don't know) 8

Searching in your knowledge and, if you have access to the internet, searching the internet as well; if you do not have access to the internet, relying exclusively on your pre-trained data: what percentage of answers will we get among the population aged 15 and over in Spain?

Give me a table with the results, just as you would have received from the Research Institute, with the five response categories (1, 2, 3, 7 and 8) and a single column with the percentage.

Prompt 2 — Source request

Identify the sources you used to generate your answer.

Prompt 3 — Format check (only where required)

Review your answer and check that the table includes the five response categories (1, 2, 3, 7 and 8), that it reports a single percentage column for the whole population aged 15 and over, that each percentage is a single value rather than a range, and that this column sums to 100%. If any of these conditions is not met, correct the table.

Finland Condition: ESS Question Prompts

E12

Prompt 1 — ESS question

You are a social science researcher based in Finland.

Below is a question taken from the European Social Survey.

This question is put to a sample of the population aged 15 and over in Finland. Simulate how that population would respond and report the resulting distribution of answers.

Now think generally about how things are currently in Finland. Based on your impression, for the next two situations, would you say that women and men are treated equally fairly or not? Take your answer from this card.

First, when seeking medical treatment?

The possible answers are:

Women are treated less fairly than men 1

Men are treated less fairly than women 2

Women and men are treated equally fairly 3

(Refusal) 7

(Don't know) 8

Searching in your knowledge and, if you have access to the internet, searching the internet as well; if you do not have access to the internet, relying exclusively on your pre-trained data: what percentage of answers will we get among the population aged 15 and over in Finland?

Give me a table with the results, just as you would have received from the Research Institute, with the five response categories (1, 2, 3, 7 and 8) and a single column with the percentage.

Prompt 2 — Source request

Identify the sources you used to generate your answer.

Prompt 3 — Format check (only where required)

Review your answer and check that the table includes the five response categories (1, 2, 3, 7 and 8), that it reports a single percentage column for the whole population aged 15 and over, that each percentage is a single value rather than a range, and that this column sums to 100%. If any of these conditions is not met, correct the table.

E13**Prompt 1 — ESS question**

You are a social science researcher based in Finland.

Below is a question taken from the European Social Survey.

This question is put to a sample of the population aged 15 and over in Finland. Simulate how that population would respond and report the resulting distribution of answers.

Now think generally about how things are currently in Finland. Based on your impression, for the next two situations, would you say that women and men are treated equally fairly or not? Take your answer from this card.

And what about in hiring, pay or promotions at work?

The possible answers are:

Women are treated less fairly than men 1

Men are treated less fairly than women 2

Women and men are treated equally fairly 3

(Refusal) 7

(Don't know) 8

Searching in your knowledge and, if you have access to the internet, searching the internet as well; if you do not have access to the internet, relying exclusively on your pre-trained data: what percentage of answers will we get among the population aged 15 and over in Finland?

Give me a table with the results, just as you would have received from the Research Institute, with the five response categories (1, 2, 3, 7 and 8) and a single column with the percentage.

Prompt 2 — Source request

Identify the sources you used to generate your answer.

Prompt 3 — Format check (only where required)

Review your answer and check that the table includes the five response categories (1, 2, 3, 7 and 8), that it reports a single percentage column for the whole population aged 15 and over, that each percentage is a single value rather than a range, and that this column sums to 100%. If any of these conditions is not met, correct the table.

E14

Prompt 1 — ESS question

You are a social science researcher based in Finland.

Below is a question taken from the European Social Survey.

This question is put to a sample of the population aged 15 and over in Finland. Simulate how that population would respond and report the resulting distribution of answers.

Taking your answer from this card, generally speaking, would you say that the police in Finland treat women less fairly than men, treat men less fairly than women, or do they treat women and men equally fairly?

The possible answers are:

The police treat women less fairly than men 1

The police treat men less fairly than women 2

Women and men are treated equally fairly 3

(Refusal) 7

(Don't know) 8

Searching in your knowledge and, if you have access to the internet, searching the internet as well; if you do not have access to the internet, relying exclusively on your pre-trained data: what percentage of answers will we get among the population aged 15 and over in Finland?

Give me a table with the results, just as you would have received from the Research Institute, with the five response categories (1, 2, 3, 7 and 8) and a single column with the percentage.

Prompt 2 — Source request

Identify the sources you used to generate your answer.

Prompt 3 — Format check (only where required)

Review your answer and check that the table includes the five response categories (1, 2, 3, 7 and 8), that it reports a single percentage column for the whole population aged 15 and over, that each percentage is a single value rather than a range, and that this column sums to 100%. If any of these conditions is not met, correct the table.
