

Supplemental Material

Elicitation Protocol for Execution: Items E9 Through E11

Block: Justice from personal experience — unfair treatment in healthcare, work and law enforcement.

Models: ChatGPT, Gemini, Claude, LLaMA and DeepSeek.

Runs: 60 (5 models $\times$ 2 countries $\times$ 6 questions), each run in its own session. Each run comprises the ESS question, the source request and, where the response requires it, the format check.

Language of Administration

Prompts were administered in Spanish in the Spain condition and in English in the Finland condition. For consistency of presentation, and so that the protocol can be assessed in full without recourse to a second language, all prompts are reproduced in this document in English. Apart from the language of administration, the two conditions differ only in the country named in the prompt and the target population specified.

Structure of This Block

Items E9, E10 and E11 are filtered questions. In the European Social Survey each is asked only to men in its male-framed version and only to women in its female-framed version. Three items therefore yield six questions, which is how the manuscript counts them. The following conditions govern administration.

- Each of the six questions is administered as its own prompt. The male and female versions are never combined into a single prompt.
- Each prompt asks for a single percentage column covering only the group to whom that question is put. There is no breakdown by sex in this block. The response scale

has six categories coded 1, 2, 3, 4, 7 and 8. Category 4 is specific to each domain.

Question wording and response categories follow the European Social Survey
showcard design (Cards 55, 56 and 57) exactly.

- The six questions are administered independently, each in its own session; they are set out here in the order E9 men, E9 women, E10 men, E10 women, E11 men, E11 women.

Table 1

Questions Administered in This Block

Question	ESS card	ESS variable	Domain	Asked to	Category 4
E9M	Card 55	trmedmw	Healthcare	Men	Have never visited doctor or sought medical treatment
E9W	Card 55	trmedmw	Healthcare	Women	Have never visited doctor or sought medical treatment
E10M	Card 56	trwrkmw	Work	Men	Have never had job or applied for a job
E10W	Card 56	trwrkmw	Work	Women	Have never had job or applied for a job
E11M	Card 57	trplcmw	Law enforcement	Men	Have never had any contact with the police
E11W	Card 57	trplcmw	Law enforcement	Women	Have never had any contact with the police

Note. Card numbers refer to the European Social Survey Round 11 showcards for the rotating module "Gender in Contemporary Europe", reproduced in Appendix C of the manuscript. Variable names correspond to the ESS Round 11 integrated data file. In that file the male-framed and female-framed versions of each item are recorded in a single variable, so E9M and E9W share the variable trmedmw, E10M and E10W share trwrkmw, and E11M and E11W share trplcmw. The version administered is determined by the respondent's answer to the module's opening item (variable nobingnd: 1 = a man, 2 = a woman), which is therefore the filter used to recover each group's observed distribution.

Execution Conditions

- Set the model temperature at the low end of its admissible range, as reported in Table 1 of the manuscript.
- Route access through a virtual private network egress point in the target country.

- Open a separate session for each question. Sessions are not reused across questions, models or countries.
- Administer the ESS question and the source request for every item, in that order. Administer the format check only where the response does not meet the required format, for example when response categories are missing, when percentages are given as ranges rather than point estimates, or when the column does not sum to 100%. Where the response already meets the format, conclude the interaction after the source request.
- Send each prompt exactly as printed, without adding, removing or reordering any wording.

Table 2
Prompt Sequence

Prompt	Function	Content
1	ESS question	Assigns the social science researcher role, presents the ESS question and its scale, specifies the evidence base and the requested output. Varies by question and country.
2	Source request	Asks the model to state the sources used. Identical for all six questions within a condition.
3	Format check	Asks the model to check its own output against the required format and to revise it. Administered only where the response does not meet that format; identical, when administered, for all six questions within a condition.

Source Request and Format Check

The source request is sent after every ESS question prompt, for all six questions and both countries, without modification. The format check is sent, likewise without modification, only where the response does not meet the required format. Both are invariant across items and conditions, and both are therefore reproduced in full with every item below, so that each entry can be executed on its own.

Spain Condition: ESS Question Prompts

E9M

Prompt 1 — ESS question

You are a social science researcher based in Spain.

Below is a question taken from the European Social Survey.

This question is put to a sample of men aged 15 and over in Spain. Simulate how that population would respond and report the resulting distribution of answers.

The next questions are about your personal experiences.

Using this card, have you felt you have been unfairly treated when visiting a doctor or seeking medical treatment because you are a man?

The possible answers are:

Yes - once 1

Yes - more than once 2

No 3

Have never visited doctor or sought medical treatment 4

(Refusal) 7

(Don't know) 8

Searching in your knowledge and, if you have access to the internet, searching the internet as well; if you do not have access to the internet, relying exclusively on your pre-trained data: what percentage of answers will we get among men aged 15 and over in Spain?

Give me a table with the results, just as you would have received from the Research Institute, with the six response categories (1, 2, 3, 4, 7 and 8) and a single column with the percentage.

Prompt 2 — Source request

Identify the sources you used to generate your answer.

Prompt 3 — Format check (only where required)

Review your answer and check that the table includes the six response categories (1, 2, 3, 4, 7 and 8), that it reports a single percentage column for the group the question is put to, that each percentage is a single value rather than a range, and that this column sums to 100%. If any of these conditions is not met, correct the table.

E9W**Prompt 1 — ESS question**

You are a social science researcher based in Spain.

Below is a question taken from the European Social Survey.

This question is put to a sample of women aged 15 and over in Spain. Simulate how that population would respond and report the resulting distribution of answers.

The next questions are about your personal experiences.

Using this card, have you felt you have been unfairly treated when visiting a doctor or seeking medical treatment because you are a woman?

The possible answers are:

Yes - once 1

Yes - more than once 2

No 3

Have never visited doctor or sought medical treatment 4

(Refusal) 7

(Don't know) 8

Searching in your knowledge and, if you have access to the internet, searching the internet as well; if you do not have access to the internet, relying exclusively on your pre-trained data: what percentage of answers will we get among women aged 15 and over in Spain?

Give me a table with the results, just as you would have received from the Research Institute, with the six response categories (1, 2, 3, 4, 7 and 8) and a single column with the percentage.

Prompt 2 — Source request

Identify the sources you used to generate your answer.

Prompt 3 — Format check (only where required)

Review your answer and check that the table includes the six response categories (1, 2, 3, 4, 7 and 8), that it reports a single percentage column for the group the question is put to, that each percentage is a single value rather than a range, and that this column sums to 100%. If any of these conditions is not met, correct the table.

E10M

Prompt 1 — ESS question

You are a social science researcher based in Spain.

Below is a question taken from the European Social Survey.

This question is put to a sample of men aged 15 and over in Spain. Simulate how that population would respond and report the resulting distribution of answers.

Using this card, have you felt you have been unfairly treated in hiring, pay or promotion at work because you are a man?

The possible answers are:

Yes - once 1

Yes - more than once 2

No 3

Have never had job or applied for a job 4

(Refusal) 7

(Don't know) 8

Searching in your knowledge and, if you have access to the internet, searching the internet as well; if you do not have access to the internet, relying exclusively on your pre-trained data: what percentage of answers will we get among men aged 15 and over in Spain?

Give me a table with the results, just as you would have received from the Research Institute, with the six response categories (1, 2, 3, 4, 7 and 8) and a single column with the percentage.

Prompt 2 — Source request

Identify the sources you used to generate your answer.

Prompt 3 — Format check (only where required)

Review your answer and check that the table includes the six response categories (1, 2, 3, 4, 7 and 8), that it reports a single percentage column for the group the question is put to, that each percentage is a single value rather than a range, and that this column sums to 100%. If any of these conditions is not met, correct the table.

E10W**Prompt 1 — ESS question**

You are a social science researcher based in Spain.

Below is a question taken from the European Social Survey.

This question is put to a sample of women aged 15 and over in Spain. Simulate how that population would respond and report the resulting distribution of answers.

Using this card, have you felt you have been unfairly treated in hiring, pay or promotion at work because you are a woman?

The possible answers are:

Yes - once 1

Yes - more than once 2

No 3

Have never had job or applied for a job 4

(Refusal) 7

(Don't know) 8

Searching in your knowledge and, if you have access to the internet, searching the internet as well; if you do not have access to the internet, relying exclusively on your pre-trained data: what percentage of answers will we get among women aged 15 and over in Spain?

Give me a table with the results, just as you would have received from the Research Institute, with the six response categories (1, 2, 3, 4, 7 and 8) and a single column with the percentage.

Prompt 2 — Source request

Identify the sources you used to generate your answer.

Prompt 3 — Format check (only where required)

Review your answer and check that the table includes the six response categories (1, 2, 3, 4, 7 and 8), that it reports a single percentage column for the group the question is put to, that each percentage is a single value rather than a range, and that this column sums to 100%. If any of these conditions is not met, correct the table.

E11M

Prompt 1 — ESS question

You are a social science researcher based in Spain.

Below is a question taken from the European Social Survey.

This question is put to a sample of men aged 15 and over in Spain. Simulate how that population would respond and report the resulting distribution of answers.

Using this card, have you felt you have been unfairly treated by

the police because you are a man?

The possible answers are:

Yes - once 1

Yes - more than once 2

No 3

Have never had any contact with the police 4

(Refusal) 7

(Don't know) 8

Searching in your knowledge and, if you have access to the internet, searching the internet as well; if you do not have access to the internet, relying exclusively on your pre-trained data: what percentage of answers will we get among men aged 15 and over in Spain?

Give me a table with the results, just as you would have received from the Research Institute, with the six response categories (1, 2, 3, 4, 7 and 8) and a single column with the percentage.

Prompt 2 — Source request

Identify the sources you used to generate your answer.

Prompt 3 — Format check (only where required)

Review your answer and check that the table includes the six response categories (1, 2, 3, 4, 7 and 8), that it reports a single percentage column for the group the question is put to, that each percentage is a single value rather than a range, and that this column sums to 100%. If any of these conditions is not met, correct the table.

E11W

Prompt 1 — ESS question

You are a social science researcher based in Spain.

Below is a question taken from the European Social Survey.

This question is put to a sample of women aged 15 and over in Spain. Simulate how that population would respond and report the resulting distribution of answers.

Using this card, have you felt you have been unfairly treated by the police because you are a woman?

The possible answers are:

Yes - once 1

Yes - more than once 2

No 3

Have never had any contact with the police 4
 (Refusal) 7
 (Don't know) 8

Searching in your knowledge and, if you have access to the internet, searching the internet as well; if you do not have access to the internet, relying exclusively on your pre-trained data: what percentage of answers will we get among women aged 15 and over in Spain?

Give me a table with the results, just as you would have received from the Research Institute, with the six response categories (1, 2, 3, 4, 7 and 8) and a single column with the percentage.

Prompt 2 — Source request

If any of these conditions is not met, correct the table.

Finland Condition: ESS Question Prompts

E9M

Prompt 1 — ESS question

You are a social science researcher based in Finland.

Below is a question taken from the European Social Survey.

This question is put to a sample of men aged 15 and over in Finland. Simulate how that population would respond and report the resulting distribution of answers.

The next questions are about your personal experiences.

Using this card, have you felt you have been unfairly treated when visiting a doctor or seeking medical treatment because you are a man?

The possible answers are:
 Yes - once 1
 Yes - more than once 2
 No 3

Have never visited doctor or sought medical treatment 4
 (Refusal) 7
 (Don't know) 8

Searching in your knowledge and, if you have access to the internet, searching the internet as well; if you do not have access to the internet, relying exclusively on your pre-trained data: what percentage of answers will we get among men aged 15 and over in Finland?

Give me a table with the results, just as you would have received from the Research Institute, with the six response categories (1, 2, 3, 4, 7 and 8) and a single column with the percentage.

Prompt 2 — Source request

Identify the sources you used to generate your answer.

Prompt 3 — Format check (only where required)

Review your answer and check that the table includes the six response categories (1, 2, 3, 4, 7 and 8), that it reports a single percentage column for the group the question is put to, that each percentage is a single value rather than a range, and that this column sums to 100%. If any of these conditions is not met, correct the table.

E9W

Prompt 1 — ESS question

You are a social science researcher based in Finland.

Below is a question taken from the European Social Survey.

This question is put to a sample of women aged 15 and over in Finland. Simulate how that population would respond and report the resulting distribution of answers.

The next questions are about your personal experiences.

Using this card, have you felt you have been unfairly treated when visiting a doctor or seeking medical treatment because you are a woman?

The possible answers are:

Yes - once 1

Yes - more than once 2

No 3

Have never visited doctor or sought medical treatment 4

(Refusal) 7

(Don't know) 8

Searching in your knowledge and, if you have access to the internet, searching the internet as well; if you do not have access to the internet, relying exclusively on your pre-trained data: what percentage of answers will we get among women aged 15 and over in Finland?

Give me a table with the results, just as you would have received from the Research Institute, with the six response categories (1, 2, 3, 4, 7 and 8) and a single column with the percentage.

Prompt 2 — Source request

Identify the sources you used to generate your answer.

Prompt 3 — Format check (only where required)

Review your answer and check that the table includes the six response categories (1, 2, 3, 4, 7 and 8), that it reports a single percentage column for the group the question is put to, that each percentage is a single value rather than a range, and that this column sums to 100%. If any of these conditions is not met, correct the table.

E10M

Prompt 1 — ESS question

You are a social science researcher based in Finland.

Below is a question taken from the European Social Survey.

This question is put to a sample of men aged 15 and over in Finland. Simulate how that population would respond and report the resulting distribution of answers.
